

DEVENDRANATH KAPA

Full Stack Developer | Agentic AI & RAG Systems

✉ devendranathkapa@gmail.com | ☎ +91 91772 42116 | Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full Stack Developer with 7+ months of hands-on experience building responsive web applications and AI-powered systems, currently focused on **Agentic AI**, **Retrieval-Augmented Generation (RAG)**, and **workflow automation** using **MCP servers** and agentic platforms like **Workato Otto**. Proven track record of shipping **production-ready, live-deployed applications** end to end using **React**, **Next.js**, **Node.js**, and **Python**. Quick learner with strong ownership, debugging, and cross-functional collaboration skills.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, TypeScript, HTML5, CSS3, Bootstrap, Tailwind CSS, JavaScript (ES6+)
- **Backend:** Node.js, Express.js, REST APIs
- **Languages:** Python, Java, JavaScript, C
- **Databases:** MySQL, SQL, MongoDB, PostgreSQL
- **AI / ML:** Agentic AI, Retrieval-Augmented Generation (RAG), Machine Learning, NLP, Generative AI, Scikit-learn
- **Libraries:** NumPy, Pandas, Matplotlib, Seaborn
- **Tools:** Git, GitHub, VS Code, Postman, Vercel, Google Colab, Hugging Face, Arduino IDE
- **Automation & Agentic Tooling:** Workato Otto, Genie Development & Testing, MCP (Model Context Protocol) Servers, Webhook Testing (Postman, curl), Workflow Recipe Design

WORK EXPERIENCE

Full Stack Developer Intern – Daynt

Jan 2026 – Present · 8 months

- Built and deployed responsive UI components using React.js and Bootstrap, ensuring consistent behavior and layout across desktop and mobile breakpoints.
- Integrated RESTful APIs with backend services, enabling seamless, reliable data flow between frontend and database layers.
- Collaborated with senior developers to debug and test web applications, tracing root causes within the component lifecycle to resolve recurring UI defects.
- Contributed to database integration tasks using MySQL, including schema design and query optimization for key feature modules.

Automation Developer Intern – Middleware Hub

June 2026 – Present · 2 months

- Built and tested AI-powered automation workflows (**genies**) on the **Workato Otto** agentic platform, including a Google Calendar genie and structured testing of a 12-workflow Okta Access Management genie against a custom 7-stage testing framework.
- Developed and validated **MCP (Model Context Protocol) server** connectors and recipes, including a Google Docs connector manifest, ensuring reliable tool integration across agentic workflows.
- Performed webhook and API integration testing using **curl** and **Postman**, validating HTTP tool equivalence and tracing field-mapping issues across connected systems.
- Documented and tracked automation testing coverage using structured Excel workflow trackers, improving traceability of genie and MCP skill test outcomes.

PROJECTS

MedicAware — AI-Powered Medicine Awareness Platform | Next.js · React · AI/NLP

[Live Demo](#) • [GitHub](#)

- Built a full-stack platform that translates complex medicine information—uses, side effects, and manufacturers—into simple, accessible language, with support for English, Telugu, Hindi, Tamil, and Kannada.
- Developed a prescription scanner feature that automatically detects medicines from uploaded prescription images.
- Designed and deployed a responsive, production-ready UI focused on healthcare accessibility for non-technical users.

[Live Demo](#) • [GitHub](#)

- Built a Retrieval-Augmented Generation (RAG) application that analyzes an uploaded resume against a target job description and computes a real-time match score.
- Implemented semantic skill extraction and comparison to surface matched vs. missing skills (e.g., AWS, Docker, TypeScript) between the resume and job description.
- Generated personalized, retrieval-backed learning resource recommendations for each identified skill gap.

QuAntNet: Quantum-Inspired Brain Tumor Classification | *Deep Learning · Python · MRI Data*

- Designed a hybrid ML and deep learning model using Quantum-Inspired Attention and orthogonal polynomial transformations for accurate brain tumor classification from MRI scans.
- Achieved strong classification accuracy through iterative feature engineering before applying the neural classifier.
- Built a full-stack web application using React (frontend) and Flask (backend) for MRI image upload, prediction processing, and result visualization.
- Published in EPJ Web of Conferences (EDP Sciences).

Intelligent Assistive System for Amputees Using IoT and Machine Learning | *Python · Scikit-learn · Arduino · IoT*

- Led a team to build a smart wearable using IoT sensors (MPU6050) and a predictive ML model (SVM, KNN, LSTM) to detect anomalies in leg posture and send real-time alerts.
- Research published in an IEEE and Scopus-indexed journal, recognized as an innovative application of ML in assistive healthcare technology.

■ EDUCATION

B.Tech in Computer Science & Engineering (AI & ML) – Vel Tech Rangarajan Dr. Sagunthala R&D Institute of Science and Technology, Chennai

Aug 2022 – May 2026

GPA: 9.1 / 10

Intermediate (MPC) – Vignan Co-op Junior College, Guntur

June 2020 – July 2022

91%

10th (CBSE) – Vignan High School, Guntur

June 2019 – Mar 2020

74%

■ CERTIFICATIONS

- Machine Learning — AWS Academy
- Cloud Foundations — AWS Academy
- Natural Language Processing — Springboard
- Generative AI — Gen AI Academy
- Python Programming — Udemy
- TCS iON Career Edge — Young Professional — TCS iON
- C Programming — Dream India Technologies

■ ACHIEVEMENTS & ACTIVITIES

- **IEEE & Scopus Publication** — Led team research on intelligent assistive systems for amputees; paper accepted in IEEE and Scopus-indexed journals.
- **Cambridge English Proficiency** — Awarded Merit, demonstrating strong professional communication skills.
- **Student Placement Coordinator** — Organized campus recruitment drives and facilitated student-recruiter communication at Vel Tech.
- **Volleyball Tournament** — 1st place in regional tournament; featured in local press for outstanding performance.
